

Sofiia Grishko

SOFTWARE ENGINEER

ABOUT ME

Software Engineering student at the University of Europe for Applied Sciences (Potsdam), with a strong quantitative foundation from Lomonosov Moscow State University's Faculty of Computational Mathematics and Cybernetics. Comfortable across low-level and high-level languages, from C and Assembly to Python and JavaScript. Passionate about software engineering, machine learning, and data analysis, with a background in algorithmic problem-solving through programming contests and robotics. Seeking an internship or working student position to apply analytical thinking and programming skills in a professional environment.

EDUCATION

B.Sc. Software Engineering

University of Europe for Applied Sciences | Potsdam | Expected 2026

- Focusing on software engineering, algorithms, and modern development practices.
- Building projects in Python and JavaScript alongside coursework in databases and system design.

Faculty of Computational Mathematics and Cybernetics

Lomonosov Moscow State University | Moscow | 2020 – 2022 (Incomplete)

- Coursework in Applied Mathematics and Computer Science, including Discrete Mathematics, Numerical Methods, and Probability Theory.
- Studied Linear Algebra, Mathematical Statistics, Algorithms and Data Structures, and Differential Equations.

PROJECTS

Chess

Personal Project | App | Algorithms & AI

Developed a desktop chess application in Python featuring a playable AI opponent. Implemented Minimax with Alpha-Beta Pruning to reduce the search space and improve move-selection efficiency. Built custom chess logic including legal move generation, board-state evaluation, and game-state management.

PetLink — Pet Care Platform

Personal Project | Backend Concept

Designed a pet care web platform. Worked on database schema, REST API structure, and overall system architecture, defining data models and core application logic for pet profiles, care schedules, and owner–service interactions.

PowerGo — Powerbank Sharing App

Personal Project | Mobile App Concept

Designed a mobile app concept for a powerbank sharing service, covering the full user journey: an interactive station map, QR-code unlocking flow, and a payment workflow. Focused on clear UX for quick rentals and integration with a backend booking system.
